UserGuideForPTPFlow

1. Description of Perspectives
   a. Local Repository
   b. Builder (workflow templates and workflows)
   c. PTPFlow Manager
   d. PTPFlow Workflow Engine
   e. PTPFlow Communications
   f. PTPFlow Triggers
2. Preferences & Security
3. Local Repository: models and actions
4. Creating a workflow, Part A: using templates
5. Creating a workflow, Part B: parts of the workflow
   a. Properties
   b. Graph
   c. Payloads
6. Creating a payload script
   a. ELF/Ogrescript
   b. Using Ogrescript to embed an arbitrary script
   c. Unwrapped shell scripts as payloads
   d. Importing script fragments
7. Configuring a PTPFlow installation
   a. Installation requirements
   b. Creating/modifying KNOWN HOST .xml documents
   c. Configurable properties
   d. Localhost and Shutdown
   e. Adding Service info entry to the registry
   f. Installation and Launch
8. Submitting a workflow to the engine
   a. Workflow Summary and Workflow Details views
   b. Viewing the node graph
   c. Inspecting events for a workflow
   d. Cancelling and Removing a workflow
9. Communications views
   a. Event Querying
   b. Tuple Space
      i. inspecting the space for parameterized configurations
      ii. using the space for platform-specific configurations (and payloads)
      iii. programming to use the space from a running application via Ogrescript
10. Triggers
    a. Defining a trigger
       i. Trigger types
       ii. Trigger actions
    b. Uploading and removing triggers
11. A guide to using Ogrescript
12. A guide to using Trebuchet
